DETAILED ACTION

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Response to Amendment

2. Applicant's amendment filed on 4/5/05 has been entered. 1, 4, 6, and 7 have been amended. No claims have been cancelled. No claims have been added. Claims 1-10 are still pending in this application, with claims 1, 4, 6, and 7 being independent.

Claim Rejections - 35 USC § 103

3. Claims 6-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Komano et al. (U.S. Patent 5,841,054) in view of Arnold et al. (U.S. Patent 5,908,997).

Regarding claim 6, Komano teaches the steps of: a digital signal processor (Fig. 2A, DSP 201 and 202), a digital to analog converter DAC 20; DSP 211 to drive the DAC (col. 4, lines 3-9); a general purpose processor CPU 101; the GPP (CPU 101) configured to received MIDI signals (col. 3, lines 50-58); the DSP response to the MIDI synthesizer and render the audio signals to the DAC via DSP to implement a MIDI synthesizer (col. 3, line 59 through col. 4, line 9).

Komano does not teach MIDI files stored in the flash memory.

Arnold et al. teach the flash memory via the GPP to open a MIDI bit stream (col. 10, line 54 through col. 11, line 17);

Art Unit: 2642

It would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the features mentioned above, as taught by Arnold, in Komano's system in order to have a wireless handsets that would utilize flash memory to optimize the use of DSP memory by only loading required sample sets from flash, optimize space and minimize costs. These are common motivations in any system and that Arnold does not change the operation of Komano.

Claims 7 and 9 are rejected for the same reasons as discussed above with respect to claim 6. Furthermore, Komano teaches data storing means ROM 102 and Arnold et al. teach data storing means RAM memory 160; Komano further teaches first data processing means general purpose processor CPU 101 for synthesizing audio signals; data converting means a digital to analog converter DAC 203; and a second data processing means for reading and parsing the MIDI files a digital signal processor (col. 3, lines 26-35).

Regarding claim 8, Arnold et al. teach the data storing means comprises a flash memory (col. 10, lines 56-57).

Regarding claim 10, Arnold et al. teach the first data processing means is word addressable (col. 12, line 51 – CPU 128 MB) and the second data processing means is byte addressable (col. 12, lines 55-57).

Allowable Subject Matter

4. Claims 1-5 are allowed.

Response to Arguments

Art Unit: 2642

5. Applicant's arguments with respect to claims 6-10 have been considered but are moot in view of the new ground(s) of rejection.
